

JANUARY NEWSLETTER

Welcome to the January edition of the SipRadius newsletter!

This month, we've been on the move across Europe, showcasing groundbreaking live broadcast capabilities and sharing our latest technological insights. With even more exciting international projects, demonstrations and presentations coming up, make sure you are following SipRadius on social media to stay informed. Plus, explore our featured innovative solutions M.aX EXP, CoralCoder, and S.iPTV. Read on for more information!

LATEST NEWS

We're thrilled to announce an exciting new phase in our libRIST development journey!

We've set up a brand-new mailing list to ensure that all of you are kept in the loop about the latest developments and updates. This year, we're gearing up to introduce a host of new features and are making strides towards achieving full support for advanced profile and DTLS.

To stay connected and receive regular updates, we invite you to join our mailing list by [clicking here!](#)

SipRadius On Tour

SipRadius has been on the move in January visiting several European locations to deliver live demonstrations, engage in client meetings, and share insightful papers on the latest technologies and solutions.

Looking ahead, we're excited to be taking our tour over to Las Vegas for a significant sporting event in early February.

If you're interested in a demonstration of our innovative solutions or any more information, please [contact us](#).

16-Camera Live Feed from Australia to Spain

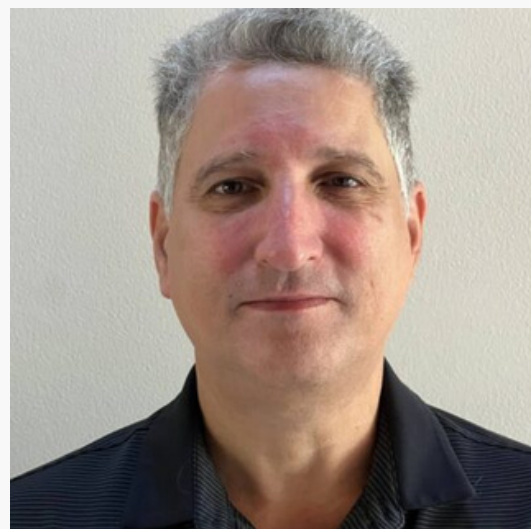

[SipRadius](#) recently met with [ISB](#) (International Sports Broadcasting Company) in Madrid for a transformative proof of concept, where we demonstrated a 16-camera live feed from Australia to Spain. Powered by the SipRadius [Coral Coder](#) and AV1 compression, SipRadius is setting new standards in long-distance live broadcasting.

WHAT'S NEXT

FOSDEM '24 Presentation with Sergio Ammirata, Ph.D.

Streaming live using RIST On Demand to thousands, how you can have your cake and eat it too ... We will present a real world method on how we architected a solution that has both low latency (500 ms glass to glass) and scalability. It is time to have a paradigm shift regarding which protocol to use when live streaming.
